

Final report

This is my suggestion for the final project report. Remember it can not be longer than 4 pages.

This is the requirements mentioned on Canvas:

“

Each group should write a **report** between two and four pages. The report should include an explanation of the work in summary and contribution of each member to the group project. (PDF file is recommended for providing the report). The report should be uploaded along with the project (code) file in Canvas through the Project submission link.

“

I also asked Aida in an email for more information:

“

As I explained in the announcement, the report should be concise and clear (at most 4 pages). It should cover the problem statement, your solution and the results. Background is not needed, you can just mention the references where you found the techniques or algorithms and short sentences on justifications (Why you chose the algorithm)(Remember to mention each person's contribution to the work)

“

About the presentation, exam and evaluation in the subject:

“

The presentation of each work (Group) will be done in a group during next week, for oral exam as I mentioned in the announcement, all group members should be present (Physically or through Skype). We ask questions from each person at the same place and time with other group members. The group members will be graded individually. Each person will be evaluated based on the passed assignments, his or her contribution to the final project and answers to the questions during oral exam. (The questions are basically code-based, we need to know how much you are familiar with data processing in python, We do not expect high standards regarding machine learning or evolutionary algorithms, because it is not a machine learning course)

“

My comments

My impression is that this is mostly used to see what we have done, who has done what, and a short description of the project. I would advise against including any more theoretical/background information, because she said this is not necessary. We need to finish this, so since there does not seem to be strict requirements to the report, I would suggest not being too picky about the exact content.
